

Stenograph's Case CATalyst® e-Key™

Dongle-free • Convenient • Safe, Secure • Free with Case CATalyst 12

Case CATalyst 12

The e-Key

The e-Key is a revolutionary “dongle free” method of software security for Case CATalyst users. The e-Key empowers users to activate Case CATalyst on a computer at home, a computer at work and even a spare computer that might be used occasionally. There's no need to carry around a security device and worry about forgetting or losing it. The e-Key provides convenience and peace of mind.

It starts with a Product Key Code

A Product Key Code (PKC) is simply a series of numbers and letters that users receive via e-mail when acquiring Case CATalyst 12. Current users[1] can get a PKC by upgrading to Case CATalyst 12 and then exchanging their physical security device for an e-Key. The PKC is used to activate Case CATalyst on up to three computers.

Activating an e-Key

Activation uses either direct or indirect access to the Internet. The first time Case CATalyst is activated on a computer, it will prompt for a PKC. It uses the Internet to request activation and in less than a minute activation will be returned. Case CATalyst will be good to go for three months when the next activation period begins. If no direct Internet is accessible, a manual activation is possible with the help of an Internet-enabled computer.

Recurring Activation

Case CATalyst alerts you to activate a full month prior to the end of its three-month activation period. Activate right then and you'll get your three months plus any remaining days. If you choose to be reminded later, set a timer on the reminder and then activate any time before the end of the month. Recurring Activations are quick, easy and best of all free.

Activating additional computers

A Case CATalyst license can be activated on up to three computers any time you wish. You activate them as you need them since you can only be in one place at a time. You're on the honor system during the three-month activation period. At the next activation period, the license server looks at usage times. Any significant overlap in usage will prevent the overlapping computers from being activated.

[1] Once you have installed Case CATalyst version 12, send an email to ekey@stenograph.com. In the email, provide your Stenograph Customer Number and the Serial Number of the security device you plan to exchange for an e-Key.

PKC arrives via e-mail

User types PKC into Case CATalyst

Case CATalyst sends an activation request to the license server

License server registers computer and returns activation to Case CATalyst

The Case CATalyst® e-Key™

Manual Activation for computers without direct Internet access

1

PKC arrives via e-mail. Make a note of it.

2

Install Case CATalyst 12 and enter PKC. Save the authorization request file to a flash drive.

3

Take the flash drive to any Internet-enabled computer. Upload the authorization request file to the e-Key Web page. Download the activation file to the flash drive.

4

Take the flash drive back to your Case CATalyst computer. Run the activation file to launch Case CATalyst.

Recurring Activation for computers without direct Internet access

1

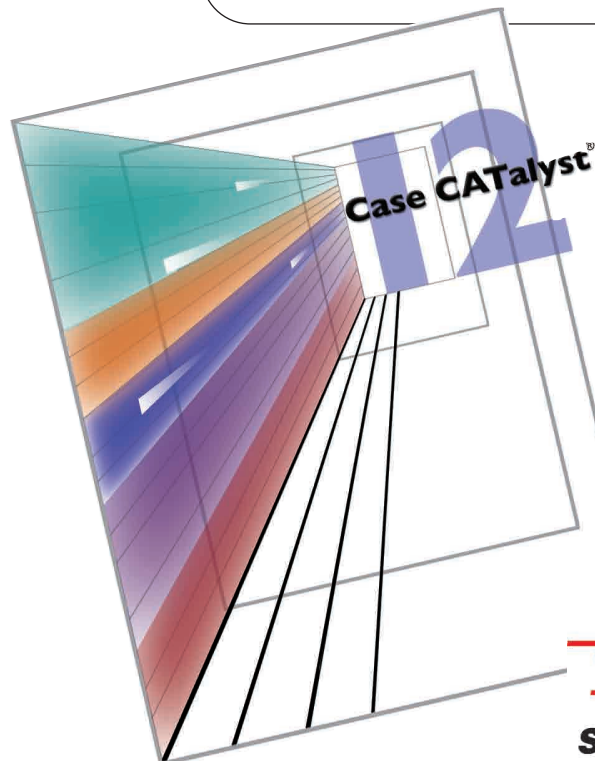

Case CATalyst alerts you one month before end of activation period to save the activation request to a flash drive.

2

Take the flash drive to any Internet-enabled computer and upload it to the e-Key Web page. Download the activation file to the flash drive.

3

Take the flash drive back to your Case CATalyst computer. Activate Case CATalyst.
