

The CATALYST Difference!

CATALYST features are designed to streamline your work and give you everything you need to optimize your productivity and minimize production time. CATALYST works with all your favorite writers to generate the best realtime feeds, transcripts, captions, and CARTView imaginable!

CATALYST uses predictive analytics and artificial intelligence to provide you with clean translations, streamlined editing, and sophisticated delivery methods—all designed to save you time.

Case CATALYST® Version 21 Wow Features!

RealTeam™ - View Team Member Locations*

Now you can quickly look at where team members are editing in a transcript. The cursor display for each connected participant will show the current page number location for each participant. You can even double click on the participant's cursor to shift your view to their transcript location.

RealTeam™ - Transfer to User*

Now the Host of a RealTeam session can make any of the currently connected participants the new Host. This is great for teams when the Reporter is done writing for the day and the Scopists want to continue their RealTeam editing without interruption. They no longer need to invite each other to a new RealTeam session. Instead, the Reporter can simply transfer the hosting of the session to one of the team members and be on their way.

Phrase Maker

The Suffix Drag/Phrase Maker feature now enables you to write phrases in a single stroke even when it is not defined in your dictionary. This gives you a fast way to make a phrase just by dragging a couple of letters!

Case Prep - Alphabetical Heads Up List

Now you have the ability to create a Heads Up list in alphabetical order. It's now faster to find specific words and phrases with Case Prep. With a Heads Up list in alphabetical order, Case Prep can even become a fast way to check spellings of names and terms while editing a transcript!

Fill In Fields vCard Import

Now you can import vCard files to speed up the process of creating Fill In Field List entries! You can obtain vCard files from law firm websites and attorney email signatures.

*EDGE for CATALYST contract required.

Edit vs. Translate Panes, Toolbars, and Settings Improvements

Case CATalyst can now automatically adjust your Alternate User Settings, Panes and Toolbars depending on if you are editing or translating. This saves you the time and trouble of adjusting those items manually each time you go from translating to editing.

CaseViewNet Browser Edition Link

Now you can create a link for clients to click on when they want to connect to your CaseViewNet Browser Edition realtime session. It's now as simple as a click for clients and without you needing to explain about how to use the Session Code and connection password.

PDF Hyperlinks

You can add hyperlinks to words and phrases in your transcripts. You can even define words and phrases with hyperlinks in your dictionary. This gives you an automated way to produce PDFs with hyperlinks pointing directly to web sites and email addresses.

And more...

A new [CLEAR] format symbol has been added for Power Define, a new Insert Entry option has been added to the search feature for dictionaries, Touch Screen scrolling has been improved, the view of the printer drop-down list has been improved, and much, much more!

You can read all about V21 features and enhancements in the CATalyst Release Notes! Open the Readme and click the CATalyst Release Notes link!
