

CATalyst® Check It™

powered by
Phoenix

CATalyst Check It powered by Phoenix, is an innovative product designed specifically for stenographers and scopists that enables efficient editing by reducing strokes and enabling easy text replacement that saves an average of 45 minutes of editing time per job, allowing reporters to earn at least an additional \$1,000 per month.

It is the ultimate assistant by providing an additional pair of eyes when editing transcripts by leveraging Phoenix, our custom-built automatic speech recognition (ASR) engine, to analyze areas where the steno transcript doesn't match what the ASR heard and providing users with the tools to make necessary edits, allowing reporters and scopists to edit transcripts more quickly, easily, and accurately.

CATalyst Integration

Check It works right within CATalyst and operates with the same menu and keyboard techniques.

Check It Icon

With the new Check It icon conveniently placed in your CATalyst toolbar, monitoring Check It's progress is effortless.

Ignore Begin & End

Tell Check It to ignore sections of your text you don't want suggestions for in the transcript.

Oops Symbol

You have the control to decide if you run Check It on the entire transcript or just a certain section by using Oops symbols.

Ignore Lists

Ignore Lists allows for the exclusion of certain words or phrases from Check It's suggestion offerings.

Keyboard Shortcuts

With a quick keystroke, it is easy to act on Check It's suggestions and make changes to the transcript.
