MAXScribe™
powered by Phoenix

Multi-Channel Recording + Annotation + Editing + Layout

MAXScribe is a new product from Stenograph designed for the court reporting and legal transcription industry. It combines multi-channel or single-channel audio with our industry-leading knowledge of editing tools specialized for efficient editing and transcript creation, increasing the number of pages that can be produced per hour by up to 50%.

It is the only software that provides multi-channel recording, annotation, Phoenix Automatic Speech Recognition, and editing within a single application, providing the complete solution for digital reporters, transcribers, and agencies from recording to production.

RECORDING & ANNOTATIONS
MAXScribe allows you to use a single application for recording and annotations. Keeping the notes with the audio eliminates the need to switch between multiple applications and streamlines communication. Our easy-to-manage recording system provides you the ability to produce a high-quality, multi-channel recording of the job, ensuring the accurate capture of the record.

PHOENIX
MAXScribe is powered by Phoenix, Stenograph's custom-built Automatic Speech Recognition (ASR) engine, designed to help you increase productivity and profitability. Phoenix was built with decades of Stenograph's experience in legal terms, editing, formatting, and layouts to create an ASR engine specifically for the legal transcription industry.

EDITING & PRODUCTION
When it comes time to edit the transcript, MAXScribe leverages Stenograph's decades of experience in creating legal transcripts to provide editing, transcript generation, and production tools that can save up to 1 hour per job.
